

p!nto driver

Japanese ergonomic cushion for drivers

black

gray

The cushion that fits the car driver.

P!NTO Driver reduces fatigue thanks to a good balance. The secret is to relax the whole body, not only the back, but also your neck, shoulders, arms, buttocks and legs. You can be more active and less stressed even after a long time driving.

Designed in Japan, Production in Japan, Distribution from Italy.

4 ideal integrated supports

Comparison of the zones of tension according to the posture

Once sitting on P!NTO, you will feel as if this cushion fits your body. P!NTO driver facilitates functional movements while driving, supporting shoulder blades, ribs, back, pelvis and thighs. It helps maintaining good posture despite car vibrations. P!NTO is not a postural recovery tool, it is a cushion that promotes a position to move easily and resume proper alignment.

Shoulder blades support: Relieves shoulders and elbows tension and facilitates the arm movements required during drive. The bottom part of the support helps maintaining the symmetry of the body axis.

Ribs support : By firmly supporting the back it helps maintaining the head up and weightless, granting a feeling of flexibility to the lumbar area.

Buttocks support: keeps the pelvis in upright and balanced position, allowing the correct alignment of the vertebral column. Prevents the pelvis from getting unbalanced as a result of the operation of the pedals or collapsing or bending as a result of gravity acceleration.

Thights support: the positioning of legs was conceived so that the hip joint stays mobile. This way the body is facilitated in moving forward to perform all the security checks. The thighbone is placed as to respect the alignment of the hip, knee and ankle joints, allowing an effortless use of the pedals and preventing tension and twisting of the knees and ankles.

Technical characteristics:

Cushion Material: High Resilience HR Polyurethane Foam

Cover: 100% Polyester

Dimensions, Weight: width 43cm x height 62cm x depth 46cm, 1250g

Resistance : tested according to the JIS standard (Japanese Industrial Standard), thickness loss of only 4% after 80000 compressions

Maintenance : Cover can be removed and machine washed inside a protection net. The inner cushion does not require special maintenance.

Application : the seat is specifically designed for drivers. It is not compatible with special car seats like the ones of sport cars.

Use : the cushion is equipped with a belt to tight it to the car seat and has anti-slip finish on the bottom to keep it firm even when you move

Winner of the 2015 award in the car accessories category granted by the newspaper "Japan Automotive Daily" in Japan
